CLAMIPACK®

PERMANENT INNOVATIONS

1991

High volume clear view clamshell created **JARDIPACK®**

1996

Creation of punnet with separate lid designed to work on automated packing lines **AGRIPACK®**

1997

Multipurpose and heat sealable tray created **MAXIPACK**

1996

Triangular design to showcase top tier fruit created **RUBIPACK®**

2010

High stacking and self-locking clamshell created to work with automated packing lines **LUCKYPACK®**

2010

Heat sealable prepared veg tray created **CRUDIPACK®**

2012

Prepared fruit -To-Go hinged shaker range created **DISTRIPACK®**

2016

Lightweight Expanded PP range created for ready to eat fruit **POLEXPAN®**

FOOD PACKAGING
A MUST!

Information

legal notices and necessary indications about the nature of the packaged product.

Containment

enables to preserve the integrity and cohesion of the product: shape, size, volume or quantities.

Protection

ensures the safe and hygienic condition of the content with respect to external constraints: contamination, cooling and heating, lighting, theft…

Preservation

ensuring preservation and organoleptic qualities of the product.

Practicality

by consumers in terms of closing / reopening, convenience and gripping.

Promotion

by ensuring the product promotion and attractiveness.

Logistics

helps secure and optimize the product transport from the producer to the end consumer and limit logistics impacts, caused by products forwarding.

ENVIRONMENTAL PRINCIPLES

Eco-design

the aim of this is to design products in line with the principles of sustainable development and environmental friendliness. Each new product is subject to a full life cycle analysis, which allows quantifying and optimizing its environmental footprint.

Eco-industrialization

the processes used minimize the consumption of non-renewable energy, water and electricity within industrial plants applying a zero-discharge policy.

Reuse

each package is designed to ensure its domestic reuse (storage, conservation, reheating…) by end users.

Recyclability

every material used is aimed at being transformed into raw material or energy, depending on existing sorting and recycling units. After use, any packaging remains a noble material, 100 % recyclable.

Circular economy

as opposed to linear economy, it aims at closing the loop of a product cycle of life, thus reducing its environmental footprint and increasing its recycling. This is the base of energy transition.

Citizenship

it deals with the individual and collective eco-responsible behavior of end users.
It is the key value, necessary to implement circular economy.
